2026 PERFORMANCE REVIEW

Digital performance. Search visibility. A clearer path to growth.

An evidence-led review of social media, paid campaigns, website performance and search discovery.

REPORTING WINDOW

01 January - 04 November 2026

PREPARED

08 November 2026

UMI GROUP

Management report | English edition

01 / EXECUTIVE SUMMARY

Visibility is established. Conversion clarity comes next.

A management view of the verified results and the decisions they support.

23,054	1,986	$2,727	82
Website sessions	Google Search clicks	Meta advertising spend	Meta lead results
GA4 interface reading	Web search export	Exact total: $2,727.13	Qualification not verified

The business opportunity

UMI already appears in search, social feeds and Google AI features. The next priority is to connect that attention to verified enquiries, improve the service pages that attract impressions, and make project evidence easier to discover.

Management decisions

Priority	Decision	Evidence
01	Fix conversion measurement and lead reconciliation.	Four website form_submit key events; 82 Meta leads are a separate conversion path.
02	Develop the exhibition service page first.	26,014 impressions, 10 clicks and average position 34.44.
03	Improve landing-page experience before scaling spend.	Paid Social engagement: 6.61%; Organic Search: 56.36%.
04	Complete gaps before ranking platform ROI.	LinkedIn spend, CRM outcomes and verified GBP performance remain unavailable.

What this report does not claim

Views are not leads. Lead forms are not qualified customers. No revenue, return on investment or platform-wide unique audience is inferred from the available data.

02 / COVERAGE & CONFIDENCE

One reporting period. Different evidence boundaries.

The requested window is 01 January - 04 November 2026. Exceptions are explicit.

Source coverage

Source	Available period	Evidence and limits
Facebook	Jan 01 - Nov 04	Authenticated interface; Nov 04 partial. Some account metrics and organic/paid split missing.
Instagram	Jan 01 - Nov 04	Authenticated API; account totals and growth. Unique reach available only by separate window.
Meta Ads	Jan 01 - Nov 04	Account, month, placement, campaign and ad data. USD; Asia/Dubai.
LinkedIn	Jan 01 - Nov 04	Admin interface; impressions and interactions. No official export or complete conversion data.
TikTok	Jan 01 - Nov 03	Overview workbook labels. Nov 04 missing; export date boundary differs from interface.
GA4 / GSC	Jan 01 - Nov 04	Exports plus authenticated observations. Last day partial; GA4 source totals differ.
Google AI	May 18 - Nov 04	Available Search Console export only; earlier data unavailable.
Google Business Profile	October only	Historical secondary dashboard; profile and branch not directly verified.

How to read the figures

Account views may include promoted content. Advertising results are shown separately; they must not be subtracted from differently defined account metrics to derive organic results. Unique reach is not additive across platforms or windows.

Data currency

The source observations were collected on 04-05 November. This presentation was prepared on 08 November 2026 and does not refresh the underlying account data.

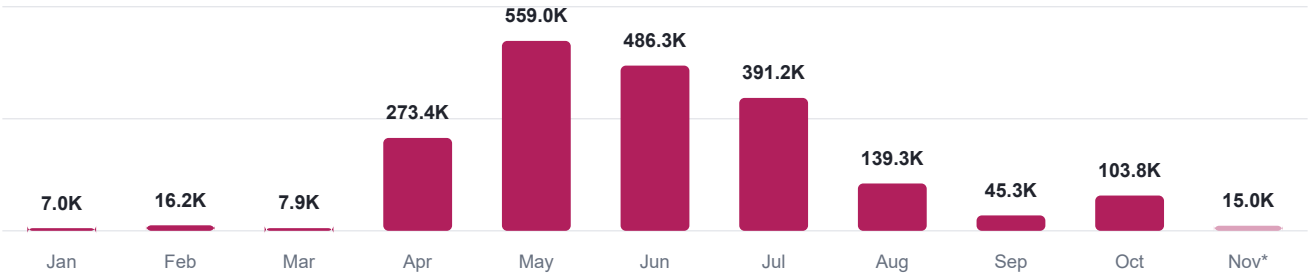

03 / FACEBOOK

Broad visibility, with a follow-up opportunity.

UMI GROUP | facebook.com/UMI.GROUP.UAE | Page ID 303611503000679

2.04M	3,582	6,452	2,860
Account views	Content interactions	Page visits	Follows acquired
Exact: 2,044,502	Account interface	Not website sessions	Not net follower growth

Monthly account views

November covers 01-04 only and was partial at collection. Account views are not a paid-only metric.

Traffic and conversation signals

Metric	Result	Interpretation
Viewers	730.4K	Rounded interface total; do not sum daily viewers.
Link clicks	5,257	Not verified as outbound website clicks only.
New messaging contacts	6	4 organic and 2 paid, within the Messaging reporting scope.
Response rate / time	14.3% / 8h 19m	Confirm operational scope and establish an agreed response process.
Follower balance	5,575	Snapshot on Nov 04; not a period growth figure.

Recommended action

Assign enquiry ownership and review response coverage. Evaluate content with attributable website visits and qualified enquiries; a high view count alone does not establish commercial impact.

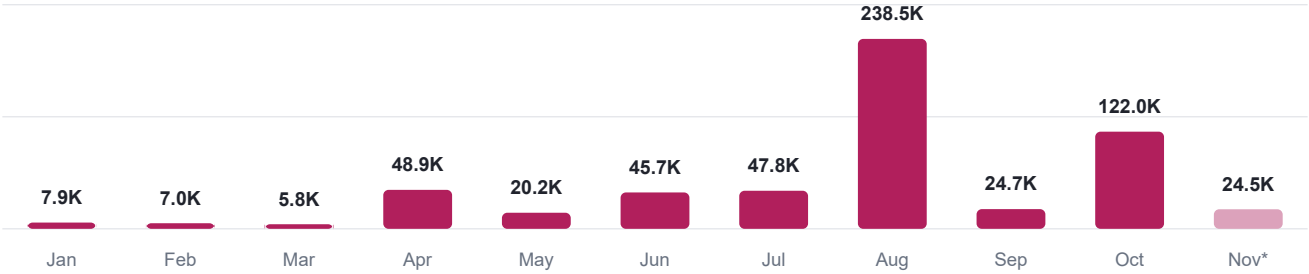

04 / INSTAGRAM

Audience growth is visible. The profile-to-site path is thin.

UMI GROUP | @umi.group.uae | Account ID 17841401437473992

592,984	6,619	+965	95
Account views	Interactions	Net follower growth	Website link taps
Includes mixed distribution	Account period metric	1,109 follows - 144 exits	From the profile link

Monthly account views

August was the strongest month for views, profile visits and net growth. November is 01-04 only.

Profile actions

Metric	Result	Meaning
Profile visits	10,728	Website taps / profile visits = 0.89%, an event ratio.
Email / call / direction taps	26 / 26 / 14	Clicks on contact controls; not successful contact or a visit.
Follower balance	1,664	Nov 05 snapshot; separate from the +965 period change.
Full-period unique reach	Unavailable	Window-level reach must not be added together.

Recommended action

Test a clearer profile call to action linked to a relevant service or case study. Tag the link consistently and evaluate engaged sessions and successful enquiries separately from Meta lead forms.

05 / META ADVERTISING

Separate awareness, traffic and lead-generation outcomes.

UMI Ad Account | act_271200960590638 | USD | Asia/Dubai

$2,727.13	2,255,200	6,377	3,684
Total spend	Paid impressions	Outbound clicks	Landing-page views
All campaign objectives	855,312 reported reach	24,359 total clicks	Ad-attributed events

Placement breakdown

Placement	Spend USD	Impressions	Outbound clicks	Leads
Facebook	1,204.62	1,753,270	4,183	10
Instagram	1,522.46	501,899	2,193	72
Audience Network	0.04	20	1	0
Threads	0.01	11	0	0

Lead generation: assess the campaign, not all spend

UMI Lead Fourm generated the 82 lead results, with $819.95 spend: approximately $10.00 per lead. Dividing all account spend by 82 gives $33.26, but mixes different campaign objectives and is not the lead campaign CPL.

Traffic concentration requires a quality check

The EHS case-study ad accounted for 3,571 landing-page views - 96.93% of the account total - on $82.32 spend. This is a traffic result, not proof of superior sales performance. Audit its landing page, tracking and audience quality.

> **Attribution and non-additivity**
>
> Ad-set attribution settings were used. The 36 attributed messaging starts may overlap with other outcomes. Do not add leads, messaging starts or cross-platform reach as unique people.

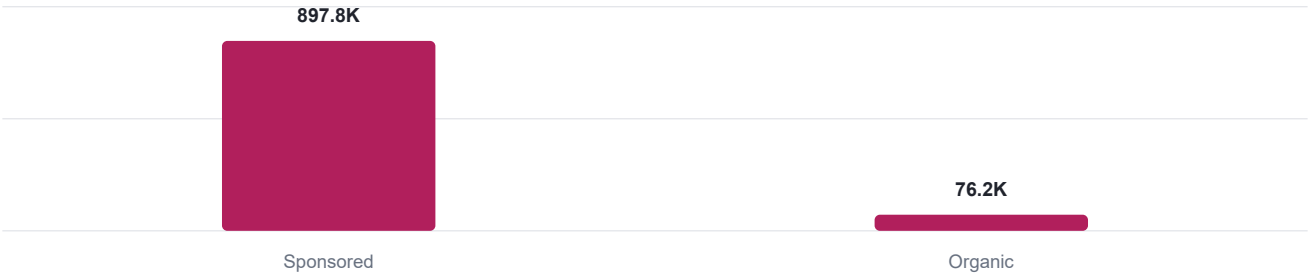

06 / LINKEDIN

Paid activity drives most reported impressions.

UMI GROUP | linkedin.com/company/umigr0up | Company ID 2632604

974,030	897,833	76,197	19,299
Total impressions	Sponsored impressions	Organic impressions	Follower balance
Requested period	92.18% of total	7.82% of total	Nov 05 snapshot

Sponsored versus organic impressions

Both values share the reported Jan 01 - Nov 04 window. The follower balance is not growth.

Interactions and collection gaps

Metric / area	Status
Reactions / comments / reposts	897 / 61 / 72
Follower acquisition and loss	Not collected for the complete period
Visitors, website clicks and leads	Not collected for the complete period
Advertising spend and campaign outcomes	Not collected
Best content across the year	Not established; visible content table used another date range

Recommended action

Complete spend, click and conversion reporting before assessing efficiency. Test project evidence and service expertise against measurable enquiry quality; do not equate impression volume with lead performance.

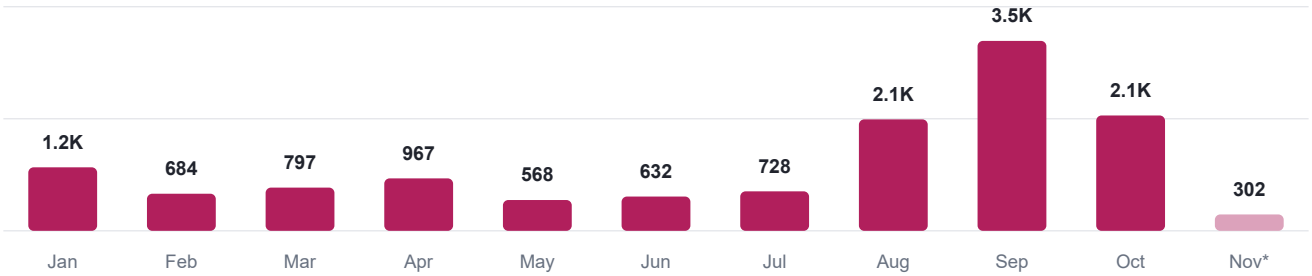

07 / TIKTOK

A small, measurable baseline. One date boundary unresolved.

UMI GROUP | @umi.group.uae | Original Overview workbook reviewed

13,533	137	202	171
Video views	Profile views	Interactions	Follower balance
Jan 01 - Nov 03 labels	Not website visits	190 likes + 4 comments + 8 shares	Nov 05 snapshot

Monthly video views

November includes 01-03 only. September: 3,502 views; October: 2,127 (-39.26%).

Why the period differs

The interface showed Jan 01 - Nov 04. The export contains 308 daily rows labelled Dec 31 - Nov 03, totalling 13,620 views. Excluding the 87 views in the Dec 31 row leaves 13,533. The workbook does not specify year or timezone; years are inferred from the selected period and row order.

What can be concluded

Likes, comments and shares represent 1.49% of views, an event ratio rather than unique-user conversion. Top account-view days were Sep 20 (653) and Aug 11 (481); these do not identify the best individual posts.

Still needed

Nov 04 and timezone reconciliation; follower growth; unique viewers; content rankings; website clicks; enquiries; and an available paid/organic split.

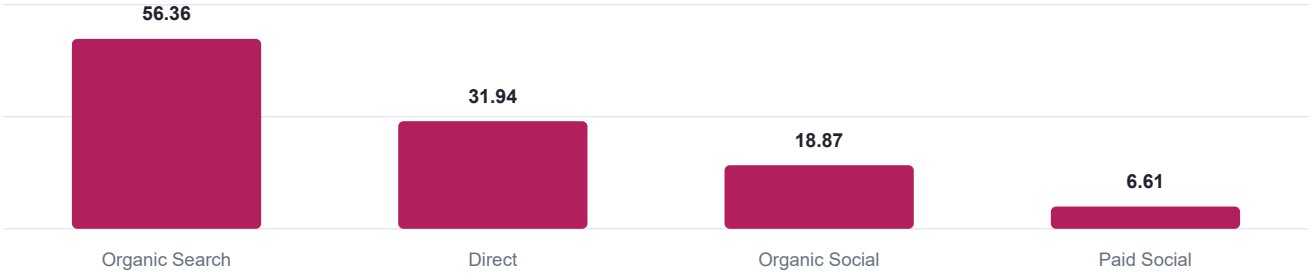

08 / WEBSITE ANALYTICS

Traffic quality and tracking need to be assessed together.

Google Analytics 4 | UMI Group | Property 408559214

23,054	19,014	26.79%	4
Sessions	Active users	Engagement rate	form_submit key events
Authenticated interface	Not the same as sessions	6,177 engaged sessions	Tracking completeness unverified

Engagement rate by acquisition channel

Percent of sessions engaged, by channel. Source definitions and attribution differ from advertising metrics.

The contact landing page is a priority

The /contact page started 9,789 sessions, 42.46% of the interface session total, with zero recorded key events. Its displayed engagement time was rounded to 0 seconds. This warrants a combined tracking, mobile performance and message-match review; it does not prove fraud or an absence of real enquiries.

> **A source difference is preserved**
>
> The channel CSV totals 23,098 sessions and 6,183 engaged sessions, versus 23,054 and 6,177 in the interface. Differences of 44 and 6 remain unexplained. The headline uses the interface reading; the channel table uses its own CSV. No forced reconciliation has been applied.

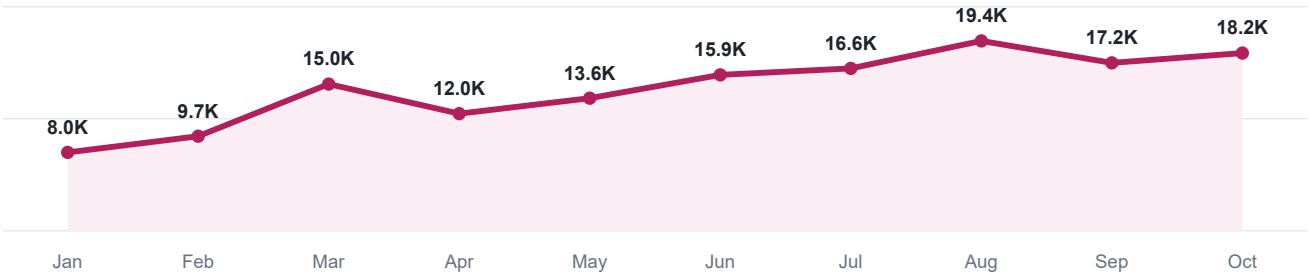

09 / GOOGLE SEARCH

More impressions have not yet translated into more clicks.

Search Console | https://umi-me.com/ | Web search export

147,087	1,986	1.35%	21.6
Impressions	Clicks	CTR	Average position
Requested period	1,545 from the UAE	Calculated from totals	Not a fixed current rank

Monthly search impressions

Complete months, Jan-Oct: impressions +126.7%; clicks -14.9%. Nov 01-04: 1,655 impressions, shown separately in the appendix.

Service-page opportunity

Page / service	Clicks	Impressions	Action
Exhibition stand design	10	26,014	Strategic priority: rebuild depth and project evidence.
Kiosks & POS	155	26,262	Improve a page already generating search visits.
Brand activation	44	25,689	Add credible campaign evidence and service detail.
Turnkey interior design	29	18,989	Clarify scope, sectors and delivery examples.
Event management / production	23	9,358	Distinguish production from event management.

Brand concentration has a sampling limit

The top 1,000 queries contain 1,220 clicks: 1,175 classified as branded (96.3%). They omit 766 clicks from the property total. This is a sample share, not the whole-site brand share.

10 / AI DISCOVERY & LOCAL

UMI is already discoverable. Local evidence remains incomplete.

Google AI, named AI referral sources and Google Business Profile are different measures.

7,249
Google AI link impressions
May 18 - Nov 04 only

5,723
AI impressions from UAE
Within the Google report

294
ChatGPT-named sessions
GA4 source-name matching

11
Gemini-named sessions
GA4 source-name matching

What AI visibility means here

The Google report covers its AI search features and is included in Web data. Do not add these impressions to the 147,087 Web total. ChatGPT- and Gemini-named sessions indicate traffic sources, not how often UMI was recommended or which questions users asked. The 170-session AI Assistant channel overlaps with named sources.

GBP: secondary October figures only

Metric	Historical dashboard value	Confidence
Views / interactions	678 / 303	Not verified in the live profile
Direction requests	217	Not confirmed physical visits
Call clicks / chats	13 / 14	Successful contact not established
Website clicks	59	Annual totals conflict: 743 / 763 / 770

Action for visibility

Confirm the correct GBP branch and business details. Publish accurate service explanations and project evidence, and pursue genuine industry references. SEO best practices remain relevant to Google AI; no special AI file or schema guarantees inclusion.

11 / CONTENT & CUSTOMER JOURNEY

Use proof of work to connect attention with commercial intent.

Content rankings below describe available lifetime counters, not annual-period engagement.

Instagram: leading available content

Content	Published	Views	Interactions
Emirati Women's Day	Aug 28	756	34
The 3D designer behind the work	Aug 12	1,037	33
Luxury real-estate spaces	Oct 09	711	30
From design to delivery	Jul 28	671	28
Victoria Travels / BookAlone project	Oct 27	404	24

Interpretation

115 Instagram materials were reviewed with lifetime counters through Nov 05. Team and project stories merit controlled testing, but these figures do not establish the best sales content or justify a fixed content allocation. Facebook counters cover 117 published materials; annual LinkedIn and TikTok content rankings remain incomplete.

A practical content-to-enquiry path

Stage	What UMI should show	What to measure
Discover	A clear project story or a useful service answer.	Relevant views, saves and meaningful engagement.
Evaluate	A service page with scope, project evidence and practical buying information.	Tagged visits, engaged sessions and enquiry intent.
Enquire	A clear brief form and accessible contact routes.	Successful submissions; contact clicks kept separate.
Qualify	Sales follow-up linked to the campaign and service.	Valid, duplicate, qualified and won outcomes.

Test proposal

Compare a documented project story with a process or team-led story over equivalent periods and objectives. Record any promotion. Judge success with qualified enquiries, not only engagement.

12 / TECHNICAL SEO

Repair the foundations before expanding the footprint.

Findings below are retained from the 04 November audit; they are not a new full-site crawl.

16.1s
Mobile lab LCP
One PageSpeed test

66 / 100
Mobile performance
Lab score, not ranking

75 / 55
Indexed / not indexed
GSC update: Oct 23

94
Sitemap-discovered pages
Successful read: Nov 03

Prioritized technical work

Priority	Finding	Acceptance check
P0	Desktop and mobile hero videos downloaded together; hero image was lazy-loaded.	Mobile no longer requests desktop video; prioritize a light opening image and re-test.
P0	Business address, phone and Saturday hours conflict across schema.	One verified entity record agrees with contact page and the correct GBP branch.
P1	Multiple meta descriptions on home and projects pages.	One relevant description and a correct canonical per page.
P1	Test/copy pages remain published and indexable.	Review each URL, traffic and links before noindex, unpublishing or redirecting.
P1	Project cards lack sufficient crawlable detail-page links.	Real HTML links connect services and substantive case studies.
P1	Exhibition and other service URLs overlap.	Assign a clear intent per URL; preserve useful content and links before any merge.

Avoid false diagnoses

Not all 55 non-indexed URLs are errors; some are redirects or non-content resources. There is insufficient CrUX field data to declare Core Web Vitals passed or failed. A single lab test is a baseline, not a field assessment.

13 / PRIORITY PAGE BRIEFS

Build the exhibition proposition. Strengthen the existing winners.

Preserve current service URLs unless a reviewed consolidation case justifies a change.

Three initial service-page briefs

Page	Draft search title	Evidence to add
Exhibition stands	Exhibition Stand Design & Build in Dubai | UMI Group	Event, location and date; actual UMI scope; verified stand area and materials; original images.
Retail kiosks	Retail Kiosk Design & Manufacturing in Dubai | UMI Group	Types of kiosk/POS; project dimensions and materials; installation and approval responsibilities.
Brand activation	Brand Activation Agency in Dubai | UMI Group	Campaign purpose, audience and execution; permission to name the client; verified outcomes.

A consistent structure for every service page

Start with what the service is, where it is delivered and who it serves. Follow with real projects, scope, process, buying considerations, evidence and a relevant enquiry route. Costs, delivery times, awards and client claims need confirmation before publication.

Arabic expansion

Start with genuinely equivalent Arabic pages for exhibitions, kiosks and activation. Use Arabic language and direction settings, with reciprocal hreflang between real language equivalents. Avoid near-identical city or keyword pages.

Prepared, not deployed

Seven page drafts are available for exhibitions, kiosks, activation, interiors, events, home and contact. Titles and descriptions are proposals. Phone, address, hours and project facts still require a verified source before live changes.

14 / 90-DAY ROADMAP

A sequenced plan with accountable acceptance checks.

Timing is measured from an agreed execution start; it is not a ranking or sales guarantee.

Delivery sequence

Window	Workstream	Proposed owner	Completion standard
Days 01-14	Measurement, identity, hero media and metadata.	Developer + analytics + business owner	One successful test lead counted once; agreed business record; one description per page; comparable speed re-test.
Days 15-30	Exhibitions, kiosks and activation; URL review; project linking.	SEO + content + project managers	Clear service scope, verified projects, crawlable links and a relevant measured enquiry route.
Days 31-60	6-10 case studies, subject to available evidence; three Arabic service pages.	Content + projects + developer	Original evidence, confirmed facts, indexable pages and validated language relationships.
Days 61-90	Industry references, local consistency, buying guides and performance iteration.	Marketing + partnerships + sales	Genuine references; dated search/AI observations; qualified enquiry reporting by source.

Weekly operating rhythm

Review task completion, measurement failures, response handling and qualified leads. Keep a dated change log. Use the same definitions and equivalent complete periods when comparing results; separate partial months and seasonal topics.

Decision gates

Before publishing: confirm staging, factual business details and project material. Before increasing budget: reconcile lead quality and follow-up capacity. Before redirects: review intent, backlinks, traffic and the target page.

15 / MEASUREMENT & GOVERNANCE

Create one commercial view without erasing source differences.

The measurement design is prepared for review; no account settings were changed.

Measurement specification

Area	Proposed implementation	Validation
Primary website lead	generate_lead only after confirmed submission success; review existing form_submit first.	Success counts once; validation/backend failures do not count; reloads and repeated taps do not duplicate.
Supporting actions	Separate WhatsApp, telephone, email and profile-download events.	Do not describe clicks as completed conversations or qualified leads.
Campaign tagging	Consistent source, medium, campaign and creative identifiers.	Keep paid and organic links distinct; validate GA4 classification; historical data is not automatically repaired.
Sales reconciliation	Aggregate lead validity, duplicates, service, qualification and stage.	Report cost per qualified lead by campaign; no ROI without verified revenue.
Reporting cadence	Monthly, equal complete windows, source and timezone documented.	Keep reach non-additive; distinguish snapshots, lifetime counters and period metrics.

Business details to resolve

The audit found +97143412341 / Al Quoz versus +97142722588 / Dubai World Trade Centre Area, plus conflicting Saturday hours. These are unresolved source conflicts, not approved alternatives. Verify the correct branch and business record before publishing structured data.

> **Reporting guardrails**
>
> Preserve the 44-session GA4 source difference. Complete GBP, LinkedIn and TikTok gaps without rewriting unavailable values as zero. Keep names, contact information and free-text enquiries out of analytics parameters.

16 / MONTHLY BASELINES

The monthly record behind the executive view.

November is partial. TikTok ends Nov 03; the other listed windows end Nov 04.

Search and social account baselines

Month	GSC clicks	GSC impr.	FB views	IG views	TikTok views
Jan	249	8,011	7,038	7,856	1,171
Feb	198	9,664	16,238	7,021	684
Mar	148	14,992	7,884	5,759	797
Apr	200	11,970	273,389	48,924	967
May	119	13,551	558,978	20,193	568
Jun	227	15,932	486,305	45,677	632
Jul	208	16,593	391,179	47,801	728
Aug	176	19,401	139,339	238,463	2,055
Sep	233	17,159	45,339	24,744	3,502
Oct	212	18,159	103,850	121,997	2,127
Nov*	16	1,655	14,963	24,549	302

Use for trend review, not audience addition

These columns measure different platform behaviours. Do not add them into one audience total or rank platform efficiency without spend, attribution and commercial outcomes.

17 / LINKEDIN MONTHLY BASELINE

Organic and sponsored impressions, month by month.

Monthly impressions from the authenticated LinkedIn admin interface.

LinkedIn impressions

Month	Organic	Sponsored
Jan	13,144	0
Feb	9,292	0
Mar	6,787	0
Apr	5,688	1,213
May	5,721	236,125
Jun	7,543	235,311
Jul	5,143	214,493
Aug	5,782	193,398
Sep	9,448	0
Oct	6,745	17,293
Nov*	904	0

Annual reconciliation

Sponsored impressions total 897,833; organic impressions total 76,197. Together they equal 974,030 reported impressions. The April-August sponsored subtotal of 880,540 matches the historical dashboard; October adds 17,293.

An impression is not unique reach

These figures are impressions, not unique people. No annual follower-growth, advertising-spend or lead total is inferred from them.

18 / EVIDENCE & LIMITATIONS

An auditable report, with visible collection limits.

Original exports and detailed structured data remain alongside this presentation.

Source register

Evidence	Primary source file / record
Website baseline and interpretation	UMI-Performance-and-SEO-Plan-Jan-Nov-2026.md
Search and Google AI exports	GSC-All-Queries-2026-01-01-to-11-04.xlsx; GSC-Generative-AI-2026-11-04.xlsx
GA4 channels / interface readings	GA4-Channels-Jan-Nov-2026.csv; authenticated-report-evidence.json
Meta account and advertising data	UMI-Meta-API-Data-Jan-Nov-2026.json
Facebook and LinkedIn interface evidence	UMI-Social-GBP-Observed-Evidence-2026-11-04.json; UMI-LinkedIn-UI-Evidence-Jan-Nov-2026.json
TikTok original export	TikTok-Exports-2026-11-05/Overview.xlsx
Technical SEO evidence	SEO-Audit-UMI-2026-11-04.md; live-pages.json
Historical dashboard / reconciliation	UMI-Historical-Dashboard-Reconciliation-2026-11-05.md

Confidence hierarchy

Authenticated platform exports and account observations are the principal evidence. The historical dashboard is secondary and contains unresolved differences. This report retains incomplete coverage rather than treating unavailable metrics as zero.

Official guidance used for recommendations

Google Search Central: AI features and your website; LocalBusiness structured data; crawlable links; and localized versions. Reference URLs are included in the digital edition and the companion SEO plan.

Status at issue

Prepared 08 November 2026 from evidence collected 04-05 November. No publishing, account configuration, campaign-budget or website changes were performed as part of this report.
